EDUCATION

Northwestern University

Evanston, IL

Masters of Science in Computer Science — Bachelors of Arts in Economics

December 2025

- Relevant Coursework: Intro to Networking, Operating Systems, Software Design Principles and Practices, Full Stack Engineering, Design and Analysis of Algorithms, Machine Learning, Software Quality Engineering

EXPERIENCE

AI Engineer

May 2026 – Present

SAP Labs

Chicago, IL

- Surfaced \$150M in influenced pipeline by building an attribution system joining tool searches to opportunity records
- Architected a scheduled ingestion service that chunks and embeds 10K+ documents into Postgres, exposing hybrid search tools that Vally, SAP's presales AI agent, uses to generate PowerPoint decks for 8K+ users
- Replaced reactive log review with pre-failure detection across 12 team services by building a devops monitoring system from scratch, with alerts, CPU, memory, and storage tracking
- Delivered edit-ready artifacts to 8K+ users by engineering a SharePoint pipeline to ingest and route agent-generated content

Software Engineer Intern

June 2025 – April 2026

SAP Labs

Chicago, IL

- Delivered visibility into 100+ customer customizations by implementing a Metadata Upgrade Tool on SAP BTP with SAP service integrations, S3 storage, PostgreSQL schema design, and system architecture documentation
- Released cross-platform (macOS/Windows) beta of Metadata Upgrade Tool by implementing platform-specific builds, resolving Black Duck compliance issues, configuring signing/notarization entitlements, and automating builds with Azure CI

Software Intern, Data Insights Practice

June 2024 – August 2024

Ollion

Chicago, IL

- Refactored Ollion website chatbot using metadata-recursive RAG, enhancing retrieval speed and precision by 50%
- Modernized a legacy web application serving 1000+ users by streamlining backend data storage in C# and building an intuitive UI with Vue.js to support seamless member dues payments

Software Engineer Intern

January 2023 – January 2024

Acorn Genetics (Pre-seed Stage 8 Person Startup)

Chicago, IL

- Optimized temperature cycles in a novel DNA sequencing device by engineering micro-controller code in C
- Improved efficiency of circuit board testing by 50% by developing a python script to mimic temperature regulation

Co-Founder, Podcast Co-Host

April 2020 – April 2024

Project Alchemy

Chicago, IL

- Produced 200+ podcast episodes on self-development and entrepreneurship, growing monthly reach to 60K accounts by leveraging audience insights to drive brand strategy

PROJECTS

C&W Check in | *Forward-Deployed Engineer*

July 2026 – Present

- Streamlined pantry check-in for 200 biweekly guests by identifying a manual check-in bottleneck, interviewing volunteers to scope requirements, and iteratively demoing builds with staff.
- Cut 5 admin hours per week by owning end-to-end delivery of a mobile web app (React 19 + TypeScript on FastAPI + SQLAlchemy) that handles guest registration and enforces a one-bag-per-guest rule via volunteer approval.

Catan | *Project Manager, Backend Development*

March 2025 – May 2025

- Built a virtual Catan game in Java in a team of four, encapsulating game rules in dedicated action classes and injecting dependencies into a central GameManager via Test-Driven Development and boundary value analysis.
- Engineered a CI pipeline with GitHub Actions, SpotBugs, Checkstyle, JaCoCo, and PIT to ensure product quality
- Led weekly sprint planning via GitHub Projects to identify and execute goals and balance developer workloads

Shoutout | *Next.js, Tailwind, Django, GraphQL, Apollo*

March 2025 – April 2025

- Engineered a full stack newsfeed app supporting user registration, login/logout, and post creation/editing with session-based authentication and secure cookie handling
- Integrated Django GraphQL backend with Next.js using Apollo Client and cache updates for instant post refresh

MediRoute | *Product Manager, System Architect*

April 2025 – June 2025

- Led a team of 6 in designing a system to optimize mobile clinic routes in Illinois using disease and accessibility data
- Architected a pipeline using K-Means clustering to identify high-need areas and Google OR-Tools to generate efficient travel routes balancing distance, capacity, and demand
- Conducted user interviews with healthcare workers and clinic staff to identify workflow pain points

ADDITIONAL INFORMATION

Skills: CI/CD, Java, Python, AWS, Vue.js, Flask, React, Websockets, SAP BTP, Django, GraphQL, Dynatrace, Langfuse

Interests: Acapella, Astrophysics, Bollywood Dance, Chipotle Bowls, Comedy, Music Festivals, Flow State
